LETTER OF RECOMMENDATION

Timothée Blaudin de Thé - Summer 2027 Internship Application

Angers, France
November 5, 2026

Dear Selection Committee,

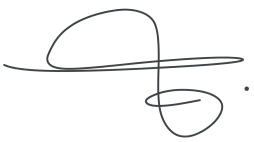

I am writing this letter with my highest recommendation for Timothée Blaudin de Thé in support of his application for a Summer 2027 research and engineering internship. As a Faculty Member and Researcher in the Department of Computer Science and Networks at ESAIP Graduate School of Engineering, I have had the pleasure of teaching Timothée in our Computer Networks curriculum this Fall semester. Over our lectures and laboratory sessions, Timothée has distinguished himself through his intellectual curiosity, maturity, and genuine collaborative spirit.

In class and during hands-on lab sessions, Timothée stands out for his active engagement and thoughtful approach to networking fundamentals. Rather than simply executing lab procedures, he consistently seeks to understand protocol mechanics at a deeper level. I have observed him ask pertinent questions that connect theoretical concepts - such as routing convergence and traffic flows - with real-world security implications. In the laboratory, he is also remarkably approachable and supportive: when peers encounter challenging configuration issues, Timothée naturally takes the initiative to help them troubleshoot their setups, demonstrating patience, clarity, and strong team spirit.

His technical initiative was most apparent during our major semester project, in which students were tasked with redesigning the complete network infrastructure of our engineering school. Timothée played an active, structured role in shaping the architecture. In particular, I noted his thoughtful approach to network segmentation, traffic organization, and service continuity, with particular attention to network reliability and clearly defined security boundaries. His technical contributions reflected a mature engineering perspective that balanced performance, scalability, and security.

What makes his academic commitment even more notable is that he pursues it while working as an apprentice at Thales. Successfully balancing demanding industrial responsibilities with rigorous graduate studies requires exceptional self-discipline, resilience, and time-management skills, all of which Timothée has consistently demonstrated. Furthermore, his excellent command of English, evidenced by a perfect TOEIC score (990/990), combined with his academic experience at UC Berkeley, demonstrates his readiness to contribute effectively in an international research environment. I recommend Timothée with my highest enthusiasm and without reservation. Please feel free to contact me should you require any additional perspectives on his character or capabilities.

Sincerely,

Dr. Sofiane Hamrioui
